REZA RAHIMI

INDUSTRIAL IT/OT & MANUFACTURING SYSTEMS ENGINEER

Production-Critical Systems • Industrial Infrastructure • Troubleshooting • Modernization

Spain | Authorized to work in Spain without employer sponsorship | +34 603 083 322 | o.rahimi@ymail.com | linkedin.com/in/omid-reza-rahimi

PROFESSIONAL SUMMARY

Industrial IT/OT engineer with 20+ years of experience supporting production-critical technology and manufacturing systems in complex industrial environments, primarily at Iran Khodro Industrial Group. Experienced in troubleshooting and recovery, industrial applications and databases, Central Control Room systems, industrial PCs and infrastructure, equipment connectivity, production monitoring, traceability and lifecycle modernization. Technical background includes Siemens WinCC, PLC-related environments, OPC/PROFIBUS, Microsoft SQL Server, Paradox, industrial RFID and specialized production and quality equipment. Also experienced in enterprise technology assessment, asset inventories, risk/lifecycle evaluation, vendor coordination and modernization roadmaps.

CORE COMPETENCIES

Industrial IT/OT operations: Production-critical system troubleshooting; recovery and maintenance; incident investigation; operational continuity; modernization

Industrial infrastructure: Central Control Room systems; industrial PCs; servers and workstations; industrial applications; hardware lifecycle management

Connectivity & controls: Siemens WinCC; Siemens PLC-related environments; SCADA/HMI-related systems; Ethernet; OPC; PROFIBUS; equipment interfaces

Manufacturing apps & data: Melody manufacturing execution platform; production monitoring; SQL Server; Paradox; manufacturing databases; machine/controller data collection

Equipment & traceability: Siemens RFID Moby I; Power Test; ZEISS/DEA CMM; laser inspection; leak testing, tightening and filling systems; CNC/test systems

Lifecycle improvement: Technical inventories; risk assessment; lifecycle planning; vendor coordination; technical validation; modernization roadmaps; budget estimation

OT network modernization: Project-based participation in secure OT architecture and segmentation planning informed by IEC 62443 principles

PROFESSIONAL EXPERIENCE

Operational Technology Development Lead

Iran Khodro Industrial Group | Tehran, Iran | 2025–Present

- Contribute to OT development strategy, technology standards and modernization planning across manufacturing environments.
- Coordinate technical requirements and planning with manufacturing, engineering and IT/OT stakeholders.
- Participate in OT network modernization work informed by IEC 62443 principles, focusing on secure architecture and segmentation planning.

Senior Industrial IT & OT Engineer

Iran Khodro Industrial Group | Tehran, Iran | 2010–2025

- Led Industrial IT/OT support across three manufacturing divisions, acting as technical focal point for troubleshooting, recovery, modernization and lifecycle management of mission-critical systems.
- Investigated issues involving manufacturing applications, databases, connectivity and shop-floor infrastructure to support production continuity across assembly, machining, body, paint, press, laboratory and warehouse operations.
- Supported servers, software and infrastructure for three major Central Control Rooms used for production monitoring and control.
- Contributed to industrial asset inventory, risk assessment, lifecycle evaluation, modernization roadmaps, budget estimates and vendor coordination.
- Provided technical input to MES, traceability and OT modernization initiatives and managed hardware lifecycle for industrial computing platforms.

Industrial IT & Manufacturing Systems Engineer

Iran Khodro Industrial Group | Tehran, Iran | 2005–2010

- Administered and supported the Melody manufacturing execution platform, production monitoring, shop-floor applications and Central Control Room systems.
- Maintained Siemens RFID (Moby I) traceability infrastructure for engine manufacturing.
- Supported Power Test, ZEISS and DEA CMM platforms, laser inspection systems and OPC/PROFIBUS industrial communications.
- Supported industrial applications and interfaces used by Engine Manufacturing Management.

REZA RAHIMI

SELECTED PROJECTS

Industrial asset assessment & roadmap: Led enterprise assessment of Industrial IT/OT assets; developed technical inventory and risk/lifecycle framework; proposed modernization priorities and preliminary budget plans.

Legacy manufacturing system modernization: Contributed to modernization of the Melody platform, including system analysis, technical validation, deployment planning and production transition.

Production monitoring & traceability: Supported Siemens RFID traceability and integration between shop-floor systems, Central Control Room applications and manufacturing databases.

MES feasibility & strategy: Led enterprise MES feasibility assessment, including requirements, technical documentation, integration considerations and architecture recommendations.

EDUCATION

• M.Sc. in IT Management (Advanced Information Systems), Payam Noor University, Tehran, Iran — 2020

• B.Sc. in Computer Engineering (Hardware), Azad University, Tehran, Iran — 2002

ADDITIONAL PROFESSIONAL EXPERIENCE

Owner & Managing Director (part-time) — Industrial Automation Magazine | Tehran, Iran | 2014–2020 — Founded and managed a bilingual technical publication; produced 20+ issues on industrial automation, OT, industrial networking and manufacturing technologies.

Adjunct Lecturer — University of Applied Science & Technology | Tehran, Iran | 2010–2014 — Taught undergraduate Computer Engineering and IT courses and supervised student projects in industrial computing and networking.

Hardware & Network Manager — Vasal Control Co. | Tehran, Iran | 2005 (8 months) — Supported hardware and network infrastructure and participated in industrial automation/control projects.

Electronics & Embedded Systems Engineer — Military Service | Tehran, Iran | 2003–2005 — Developed an Intel 8051-based embedded board and integrated an RF analyzer with a PC to digitize, display and store measurement data.

Hardware Support Technician (part-time) — Iran Air (HOMA Airlines) | Tehran, Iran | 1998–2003 — Assembled, upgraded, maintained and repaired PCs and peripherals.

PROFESSIONAL CONTRIBUTIONS & PUBLICATIONS

Core technical member of the enterprise industrial automation team and technical member of the enterprise RFID & traceability steering committee. Best Paper Award at an International RFID Conference; author of a conference paper on IT management in manufacturing; translator of an ISA publication on MES; author of technical publications on industrial automation, RFID and manufacturing technologies.
